Allergies and Reactions

When prescribing, Bp Premier will check the patient's recorded allergies and reactions and notify the provider with an alert if a drug class or ingredient may cause a reaction.

Record the allergy to a dug class if you with to be warned about all products in the class. Save Cancel	Reactions recorded with the Other radio button, and free text typed in DON'T trigger a warning.

When prescribing medications, the information about them, including their interactions with other medications, is checked with the MIMS entry.

Bp Premier checks for:

- · interactions with conditions recorded in the patient's history
- · interactions with other medications the patient has been already prescribed.

actors	New Rx - Celecoxib 100mg Capsule × Warning - Diabetes Mellitus, Type 2 Warning This patient has Diabetes Mellitus, Type 2 in the past history list. Celebrex should be used with caution in patients at high risk of cardiovascular disease including those with significant and multiple risk factors (e.g. diabetes, hypertension, hypercholesterolaemia, cardiac failure and smokers).		New Rx - Erythromycin 250mg Capsule Trug interaction with Warfarin Drug interaction Erythromycin increases plasma levels and activity, and reduces clearance of Warfarin 1mg Tablet significantly.		
Other Warning Fa	 If the patient has been prescribed a medication they are allergic to: 1. Right-click the medication in the Current Rx tab. 2. Select Cease Rx. 3. Check the Add to allergies/adverse reactions checkbox.
